Overall Rating	Reject
Detailed Comments	The goal of the paper---compositionality---was overall appreciated by the reviewers. The problem is that it was difficult to ascertain what the contribution of the compositionality was from the presentation. The reader is not left with a strong sense of how much of an impact this has on the final results. A less important, but relevant, other issue is that some of the remarkably good performance results could be explained better (eg, middle of the main results figure).
